The screenshot shows the DTC GSI Users Page. The browser address bar displays 'www.dtcenter.org/com-GSI/users/index.php'. The page features a navigation menu with links for 'DTC home', 'Reference Configurations', 'Testing & Evaluation', 'Community Codes', and 'Verification'. A banner at the top reads 'Community Gridpoint Statistical Interpolation | DTC'. Below the banner, the breadcrumb trail indicates 'You are here: DTC • Community GSI Users Page'. A left sidebar contains a table of contents with links for 'Home', 'Terms of Use', 'Documentation', 'User Support', 'Download', 'Tutorial', and 'Related Links'. The main content area is titled 'Community Gridpoint Statistical Interpolation System' and contains a welcome message, a description of the GSI system, and a list of advanced features. A right sidebar contains a list of recent releases, including '2013 GSI 08.05.12', 'METv4 05.22.12', 'UPP v2 04.19.12', 'WRF v4 04.18.12', and 'GFDL v4 08.29.12'.

**Community Gridpoint Statistical Interpolation System**

Welcome to the users page for the Community Gridpoint Statistical Interpolation (GSI) system. The community GSI system is a variational data assimilation system, designed to be flexible, state-of-art, and run efficiently on various parallel computing platforms. The GSI system is in the public domain and is freely available for community use.

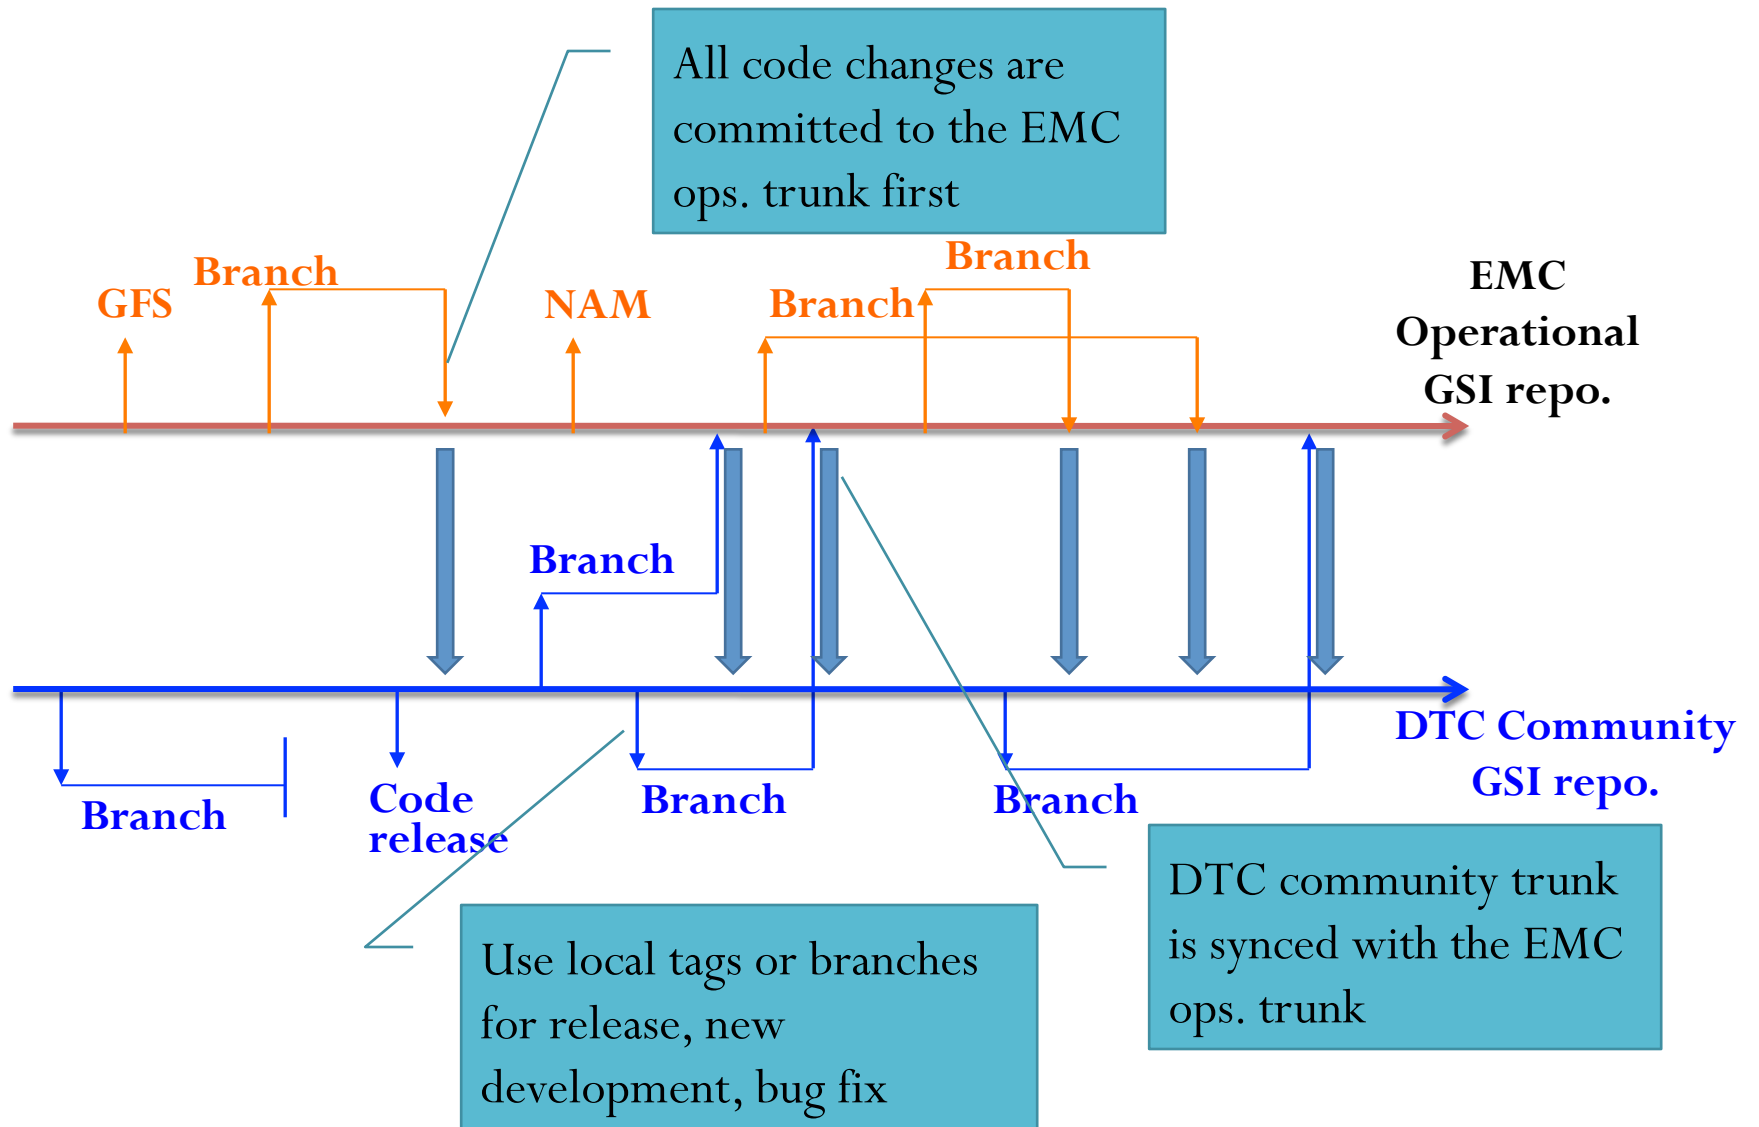

The Developmental Testbed Center ([DTC](#)) currently maintains and supports a community version of the GSI system (now at Version 3.2). The testing and support of this GSI system at the DTC currently focus on regional numerical weather prediction (NWP) applications coupled with the Weather Research and Forecasting ([WRF](#)) Model , but the GSI can be applied to Global Forecast System(GFS) as well as other modelling systems.

The GSI version 3.2 is a three-dimensional variational (3D-Var) system with modules developed for advanced features. Some of these GSI advanced features is listed as follows:

- Combined with an ensemble system, this version of GSI can be used as an ensemble-variational hybrid data assimilation system. One of an operational examples of such a capability is current NCEP's global data assimilation system (GDAS), implemented in Spring, 2012.
- Coupled with forecast models and their adjoint models, GSI can be turned into a four-dimensional variational (4D-Var) system.

2013 GSI 08.05.12  
METv4 05.22.12  
UPP v2 04.19.12  
WRF v4 04.18.12  
Releas 08.29.12  
GFDL v4 08.29.12

# Dual GSI Code Repository Structure (2013)

# What is the difference between two repositories?

The DTC community repository is not only a mirror of the EMC operational GSI repository, but is also used to maintain

- an automatic **multiplatform** compiling system
- community tools (scripts, reading and diagnostics programs...)
- GSI required libraries

✓ Why are there two repositories?

Mostly due to security concern. Also because community users require more than just GSI source code. DTC, EMC and other GSI partners are working together so no worries please.

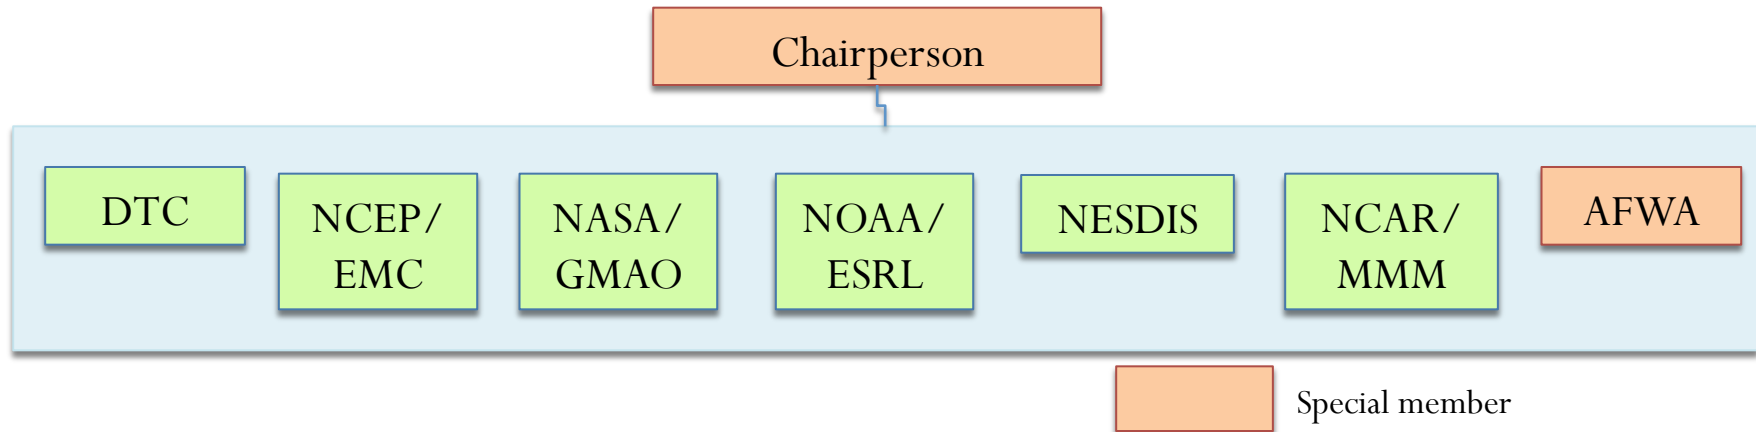

✓ Which GSI should I use ?

There is no “DTC GSI”, “EMC GSI” or “global GSI”. There is **only one evolving GSI**.

For a researcher, community release should be sufficient to use. If you are interested in getting new development back to the GSI trunk, contact GSI helpdesk ([gsi\\_help@ucar.edu](mailto:gsi_help@ucar.edu)) or EMC get access to the developmental version of GSI.

# Code Management: GSI Review Committee

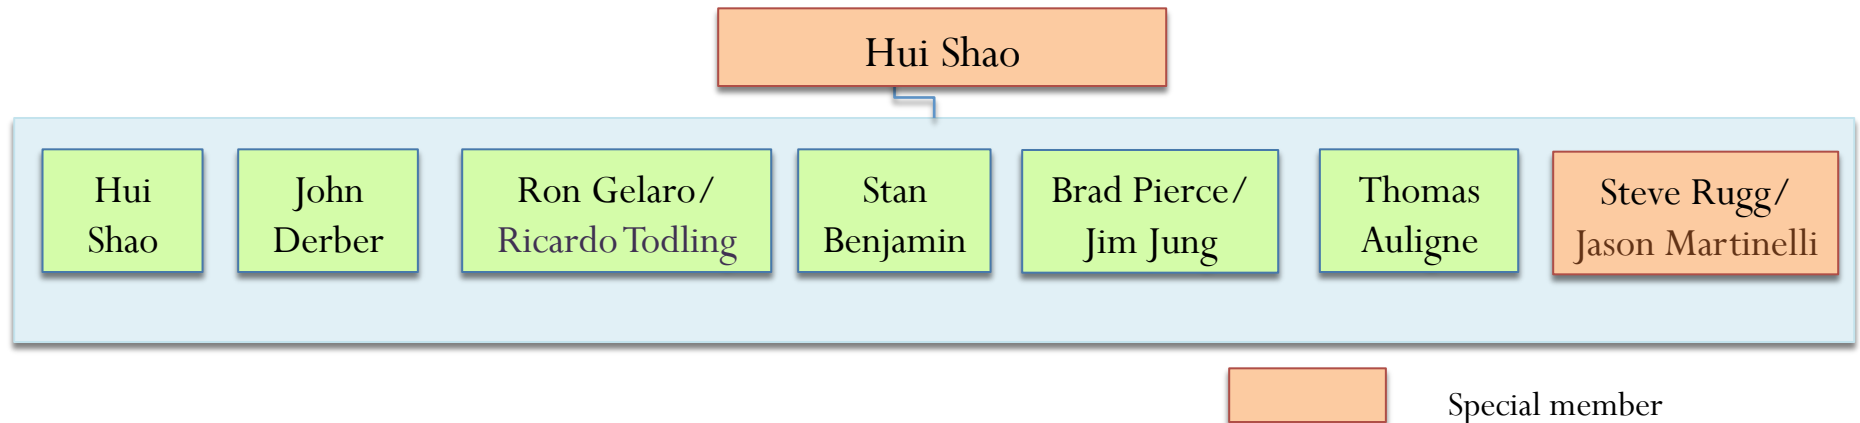

## Members:

- Actively involved in the GSI development and support work;
- Commit time and effort to being involved in full functions of the committee.
- Each member group has only one formal representative (committee member) in the Committee and one valid vote regarding GSI related issues.

## Special members:

- Those who are or will be actively involved in GSI efforts but do not match the criteria for full membership;
- Do not have veto power but can participate in Review Committee meetings regularly.
- ✓ As part of its users' support duty, DTC represents general community users/developers.

# GSI Review Committee (2013)

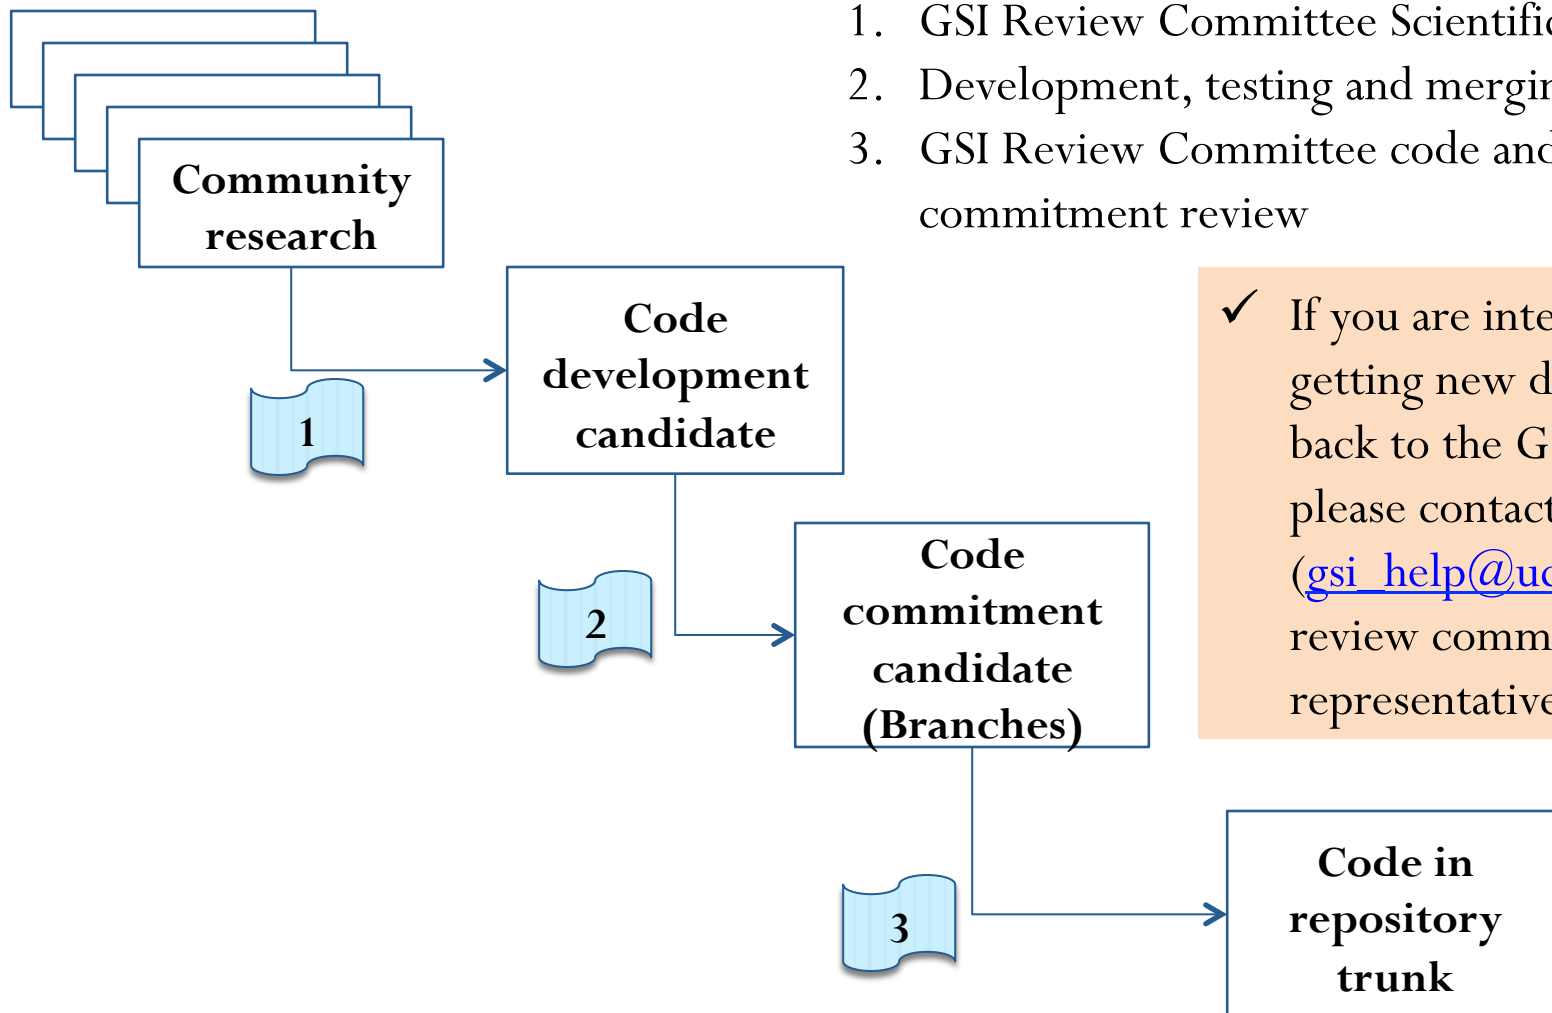

## 1) Coordination and Advisory (First meeting on Sept 30, 2010)

- Propose and shepherd new development
- Coordinate on-going and new development
- Process management
- Community support recommendation

## 2) GSI Code Review (First trial on Nov 10, 2010)

- Establish and manage a unified GSI coding standard
- Establish and manage a process for proposal and commitment of new developments to the GSI repository.
- Review proposed modifications to the code trunk.
- Make a decision on whether code change proposals are accepted or denied.

# GSI R20 Transition Procedure

1. GSI Review Committee Scientific Review
2. Development, testing and merging
3. GSI Review Committee code and commitment review

✓ If you are interested in getting new development back to the GSI trunk, please contact GSI helpdesk ([gsi\\_help@ucar.edu](mailto:gsi_help@ucar.edu)) or any review committee representative.

# Tutorial Agenda: Lectures

## Monday, 5 August

Fundamentals of Data Assimilation

Overview of GSI

**GSI Fundamentals (1): Setup and Compilation**

**GSI Fundamentals (2): Run and Namelist**

Introduction to Practice Session

## Tuesday, 6 August

Observation processing

Background & Observation Error

Community Radiative Transfer Model (CRTM)

Radiance data assimilation

**GSI Fundamentals (3): Diagnostics**

## Wednesday, 7 August

GSI Hybrid Data Assimilation

Aerosol Data Assimilation

Active Sensor Observation Data Assimilation

GSI Infrastructures

**GSI Fundamentals (4): Applications**

# Invited Speakers

- University of Maryland
  - Kayo Ide
- NCEP/EMC, NESDIS, JCSDA
  - John Derber
  - Jeff Whiting
  - Wanshu Wu
  - Paul Van Delst
  - Andrew Collard
  - Daryl Keist
  - Li Bi
- DTC
  - Hui Shao (NCAR, EMC visitor)
  - Ming Hu (NOAA/ESRL)
  - Don Stark (NCAR)
- NCAR
  - Zhiquan Li
- NASA
  - Ricardo Todling

## Some Notes

- **Practical sessions** are held in the afternoon of Mon-Wed, conference room (cross Atrium)
  - Registrants may need to pair up (20 computers). It might be ok to use your own computers. Please bring it if you have one.
  - Please get token for the computer accounts and return the token at the end of the Wed practical session. Student accounts will be closed after Wed.
- **Presentations** are available at [http://www.dtcenter.org/com-GSI/users/docs/tutorial\\_presentations\\_2013.php](http://www.dtcenter.org/com-GSI/users/docs/tutorial_presentations_2013.php)
- **Group Picture:** Monday Morning Break, 10:30 am, Today!
