Outline

- Characteristics of the active sensor – scatterometers background
- Scatterometer products validation
- Choices of data assimilation (DA) related techniques
- Assimilation of scatterometers within GSI
- Forecast impact results

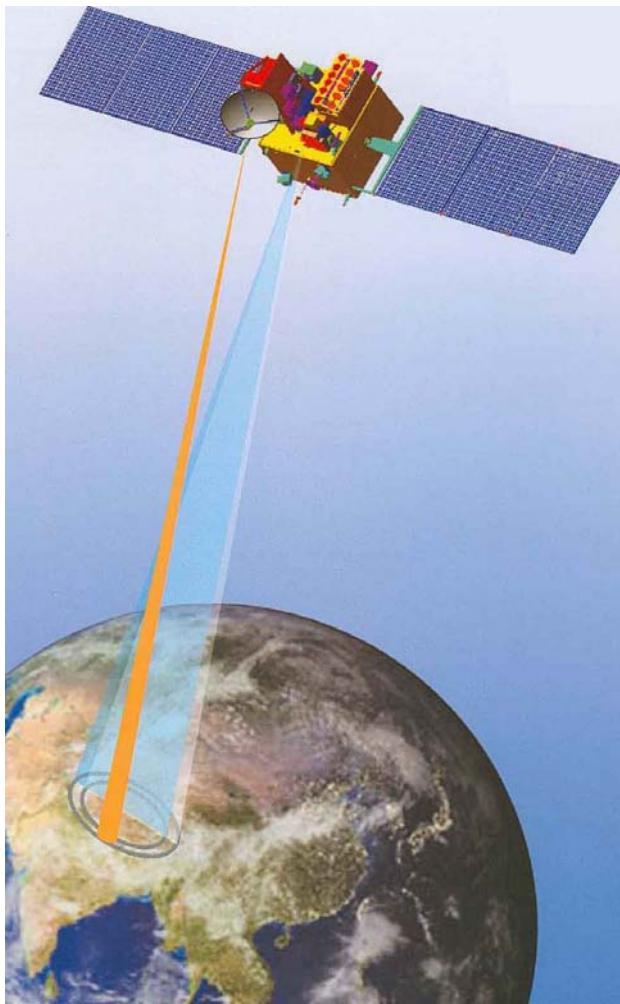

Advanced Scatterometer (ASCAT)

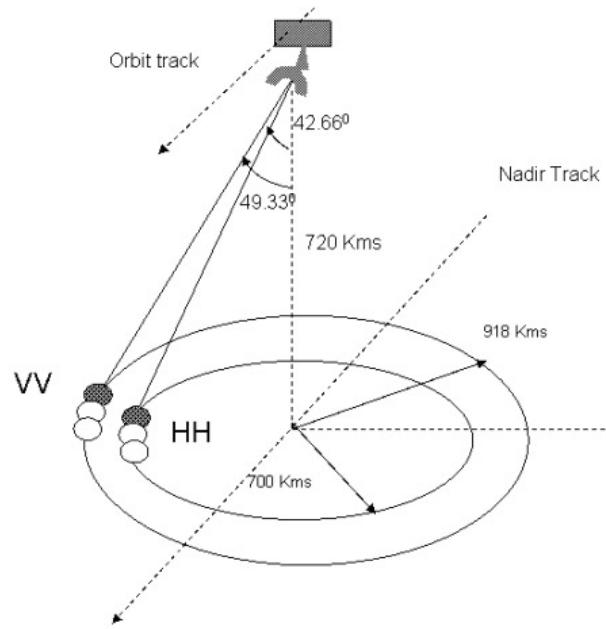

C-band (5.255 GHz)
Cross track
VV pol
09:30(dsc)
50/25km resolution
2X550 km swath

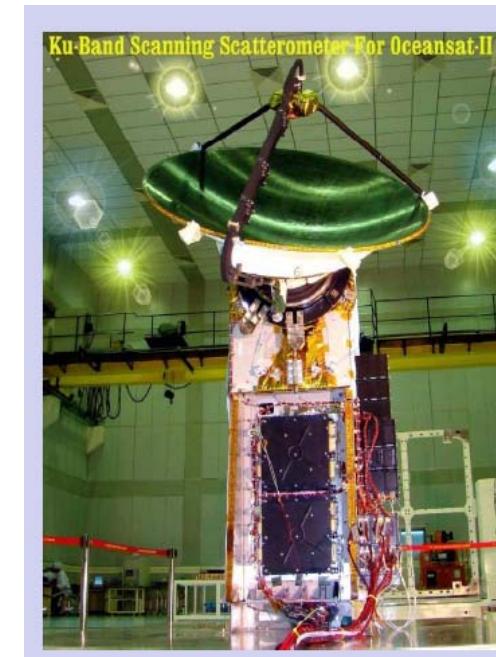

Oceansat-2 Scatterometer (OSCAT)

Ku-band (13.51 GHz)
noon (dsc)
VV and HH pol
50/25km resolution
1800 km swath

Oceansat-II Scatterometer Viewing Geometry

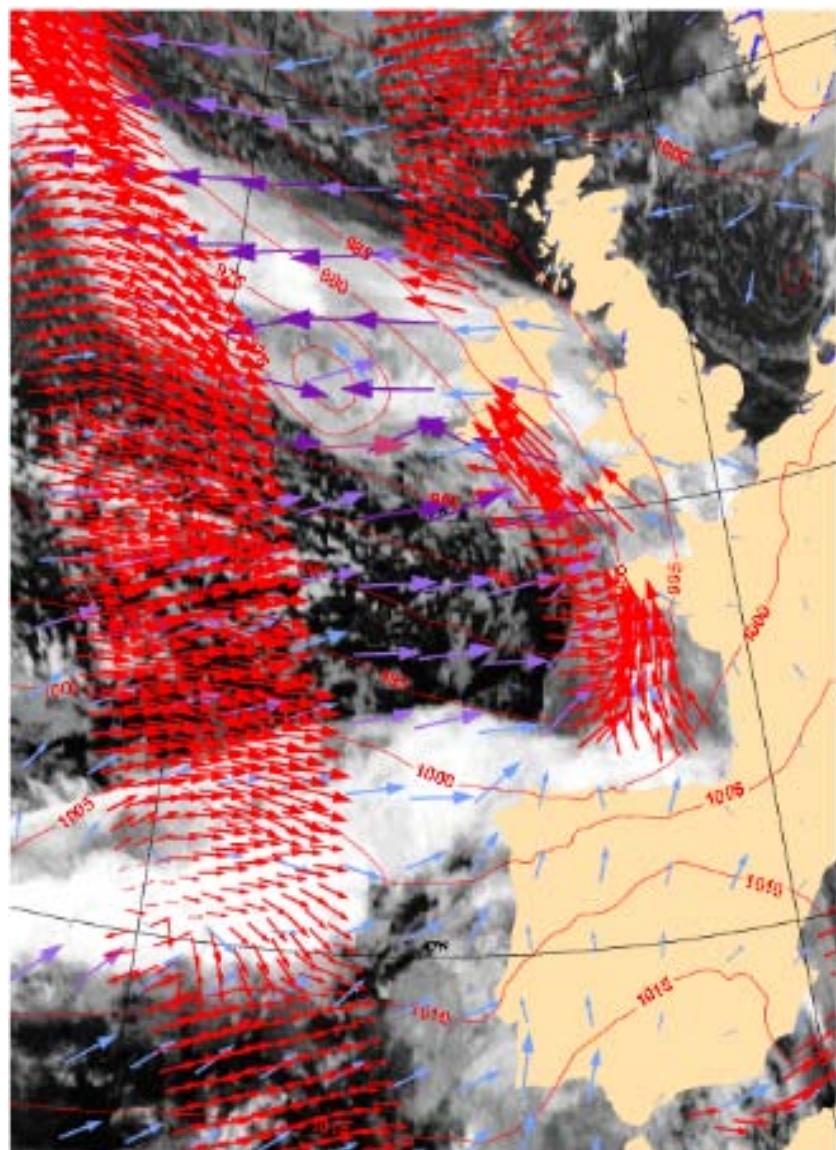

OceanSat-2 Scatterometer- OSCAT Introduction

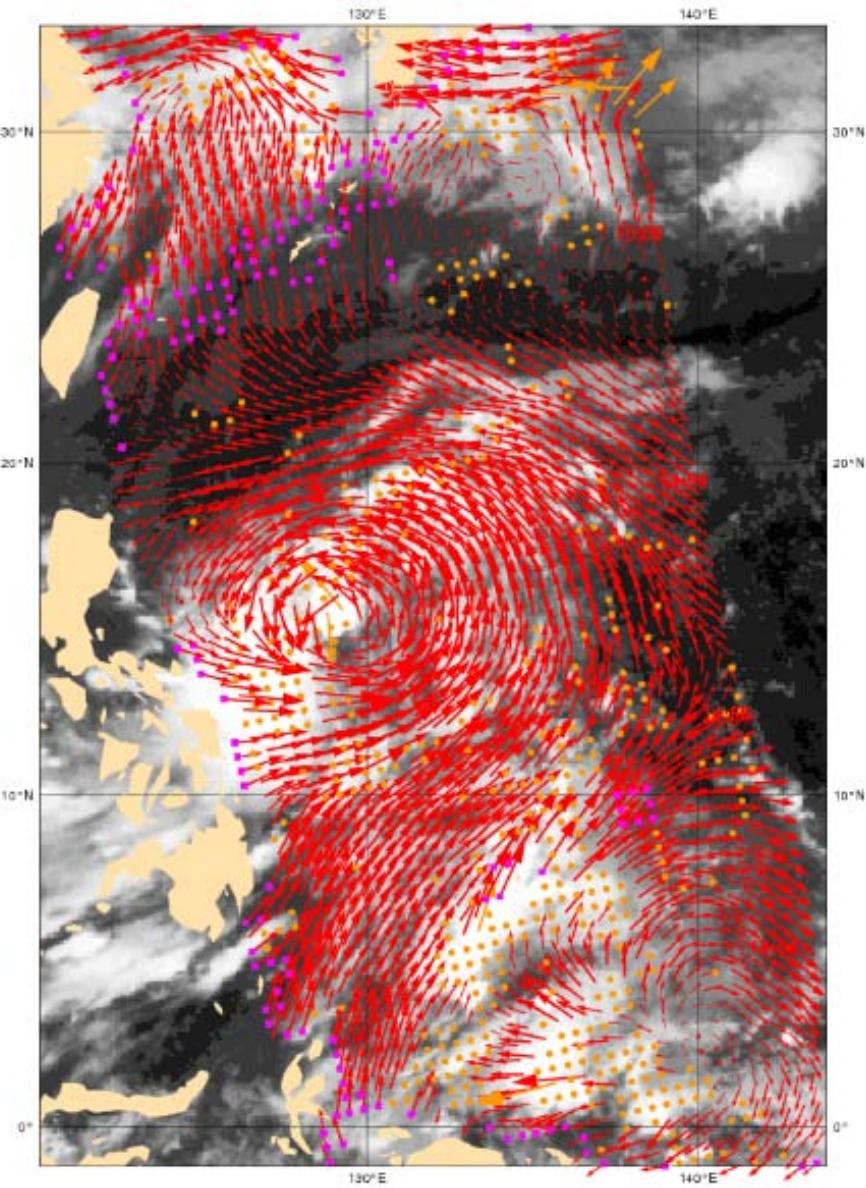

- OSCAT is a Ku-band scatterometer with similarities to QuikSCAT
 - Launched Oct 2009 on board of OceanSat-2 satellite by ISRO.
 - Provide ocean surface wind speed and direction measurements.

Parameter	OSCAT
Operational Frequency	13.515 GHz
Polarization (Inner/Outer)	HH/VV
Altitude at Equator	720 km
Orbit Near Repeat Cycle	2 days
Local time at asc/desc node	noon at desc node
HH 3dB footprint (Az x El)	26.8 x 45.1 km
Incidence Angle (Inner)	49 deg
Incidence Angle (Outer)	57 deg
Swath Diameter (Inner)	1400 km
Swath Diameter (Outer)	1836 km

Scatterometer Products Validation

- Collocation with buoy, ship data.
- Validation against GDAS, ECMWF 10 meter winds.
 - Speed
 - Direction

Winds Assimilation in GSI

$$J = \mathbf{x}^T \mathbf{B}^{-1} \mathbf{x} + (\mathbf{H} \mathbf{x} - \mathbf{y})^T \mathbf{R}^{-1} (\mathbf{H} \mathbf{x} - \mathbf{y})$$

\mathbf{x} : Vector of analysis increments.

\mathbf{R} : observation error + representativeness error, since the (spatial) context of observation is generally different from state variables.

\mathbf{B} : random background error, contains, e.g., spatial correlations between errors of neighbouring state variable.

\mathbf{H} : transformation operator from the analysis variable to the form of the observations.

Winds Assimilation in GSI (cont'd)

- State Vector: U, V
 - Needed for many routines
 - `setupw.f90`, `read_sfcwnd.f90`
 - u,v updated by calculating derivations of streamfunction and velocity potential
- Control Vector: Stream function, Velocity potential
- H: transformation operator from the analysis variable to the form of the observations.
 - Interpolation to ob location/time
 - 3-D sigma interpolation reduction below bottom level using model factor

Steps towards assimilating OSCAT in GSI

Steps	Action
I	Receive and archive OSCAT WMO BUFR data (50KM) from KMNI daily.
II	Convert OSCAT BUFR data to EMC tanks
III	Generate 6 hour NCEP OSCAT dumps (OSCAT is not part of PREPBUFR).
IV	Read OSCAT bufr dump directly from GSI. (new subroutine read_sfcwnd.f90 added)
V	Modify setupw.f90 and add QC for OSCAT. (291 has been assigned to OSCAT for global error table)
VI	Two Season OSCAT assimilation run on Zeus for impact study.
