

# Configuring the HWRF

# Why and How?

- Old system had numerous namelist files.
  - Each was maintained independently.
  - Changes had to be made multiple times.
  - Had to be careful to avoid conflicts.
  - Otherwise, hard-to-detect errors happened.
- Now: central configuration information.

# Information Flow

Similar to ksh storm\*.holdvars.txt

# Unix .conf Files

## Format

parm/\*.conf

hwrp\_input.conf

hwrp.conf

hwrp\_holdvars.conf

hwrp\_basic.conf

system.conf

user-specified  
files & options

- Simple format:

```
# This is a comment
```

```
[section]
```

```
key=value ; This is also a comment
```

```
key2=value2
```

# Unix .conf Files

## Doxygen Documentation

### parm/\*.conf

hwrp\_input.conf

hwrp.conf

hwrp\_holdvars.conf

hwrp\_basic.conf

system.conf

user-specified  
files & options

- <http://www.emc.ncep.noaa.gov/HWRF/scripts/conf-options.html>

- Documentation format:

```
## Short description of section
```

```
#
```

```
# Long description of section
```

```
# @note Doxygen+markdown syntax
```

```
[section]
```

```
key=value ;; short description
```

```
## Short description of key2
```

```
#
```

```
# long description of key2
```

```
key2=value2
```

# Unix .conf Files

## Python String Substitution

parm/\*.conf

hwrf\_input.conf

hwrf.conf

hwrf\_holdvars.conf

hwrf\_basic.conf

system.conf

user-specified  
files & options

- String substitution:

**[myprog]**

`basedir` = `/path/to/basedir`

`exename` = `myprog`

`exepath` = `{basedir}/exec/{exename}`

- Key `exepath` in **[myprog]** expands to this string:
  - `/path/to/basedir/exec/myprog`

# Unix .conf Files

## Python String Substitution

parm/\*.conf

hwrf\_input.conf

hwrf.conf

hwrf\_holdvars.conf

hwrf\_basic.conf

system.conf

user-specified  
files & options

- String substitution with formatting:

**[myprog]**

```
basedir = /path/to/basedir
```

```
gridnum = 5
```

```
exename = myprog_grid_{gridnum:02d}
```

```
exepath = {basedir}/exec/{exename}
```

- Key exepath in **[myprog]** is:
  - /path/to/basedir/exec/myprog\_grid\_05
- C-style (printf) formatting codes

# Unix .conf Files

## HWRF Extensions

parm/\*.conf

hwrf\_input.conf

hwrf.conf

hwrf\_holdvars.conf

hwrf\_basic.conf

system.conf

user-specified  
files & options

- Substitute from specified section:

```
[grid]
```

```
num = 5
```

```
[myprog]
```

```
basedir = /path/to/basedir
```

```
exename = myprog_grid_{grid/num:02d}
```

```
exepath = {basedir}/exec/{exename}
```

- Key exepath in **[myprog]** is:
  - /path/to/basedir/exec/myprog\_grid\_05
  - **grid/num** = **[grid]** section **num** key

# Unix .conf Files

## HWRF Extensions

parm/\*.conf

hwrf\_input.conf

hwrf.conf

hwrf\_holdvars.conf

hwrf\_basic.conf

system.conf

user-specified  
files & options

- Substitute from **[config]** and **[dir]** if not in local section.

**[dir]**

basedir = /path/to/basedir

**[config]**

gridnum = 5

**[myprog]**

exepath = {basedir}/exec/{exename}

exename = myprog\_grid\_{gridnum:02d}

- Key exepath in **[myprog]** is:
  - /path/to/basedir/exec/myprog\_grid\_05
  - basedir from **[dir]**, gridnum from **[config]**

# File Ordering

parm/\*.conf

hwrf\_input.conf

hwrf.conf

hwrf\_holdvars.conf

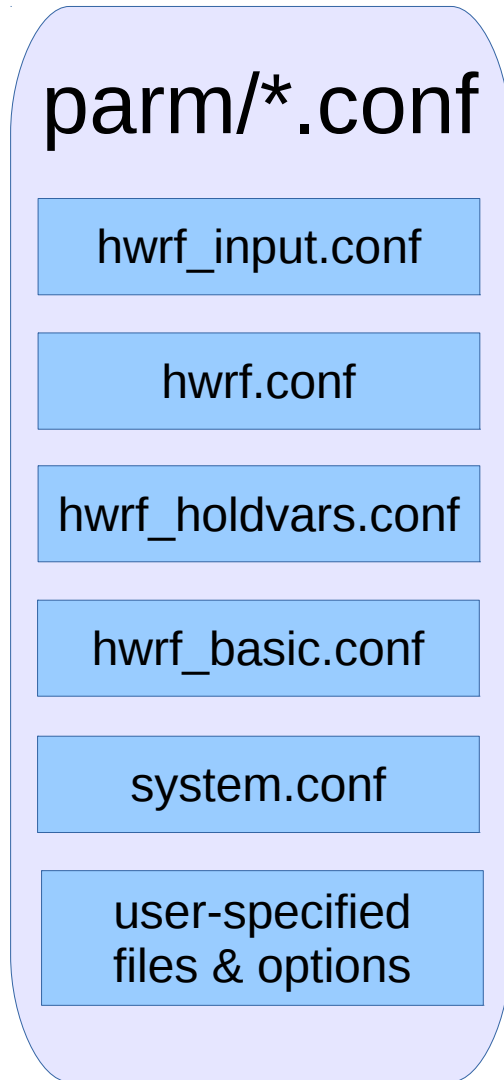

hwrf\_basic.conf

system.conf

user-specified  
files & options

- Files read in order
- Options in later files overrides earlier.
- system.conf: per-system (Jet, WCOSS, S4, etc.) overrides
- user-specified-options: hourly output, alternate microphysics, etc.
  - user-specified files read before options
  - ../path/to/my.conf
  - **section**.key=value

# Config Processing

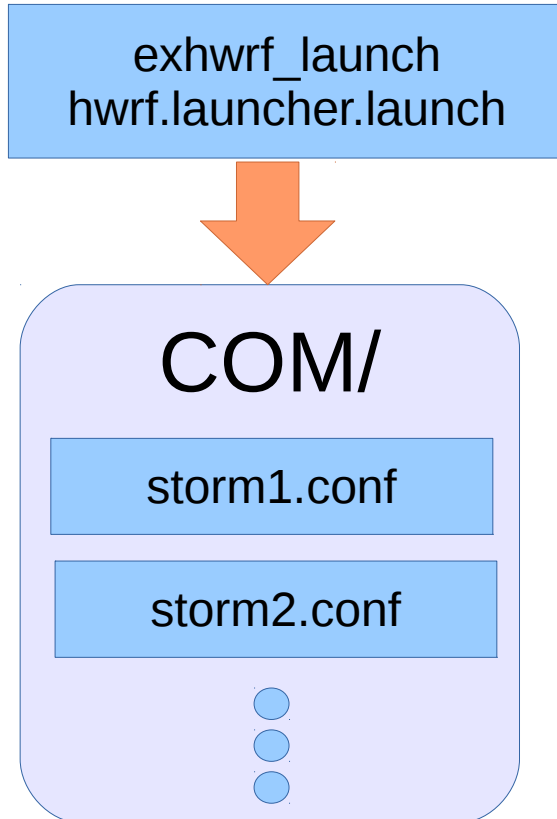

exhwrp\_launch  
hwrp.launcher.launch

- Python ConfigParser.ConfigParser parses \*.conf files in order, then
- user's files and options sent to hwrp.launcher.launch() added.
- Result put in an in-memory hwrp.launcher.HWRFLauncher object
- Sanity checks run on configuration.

# Make storm\*.conf

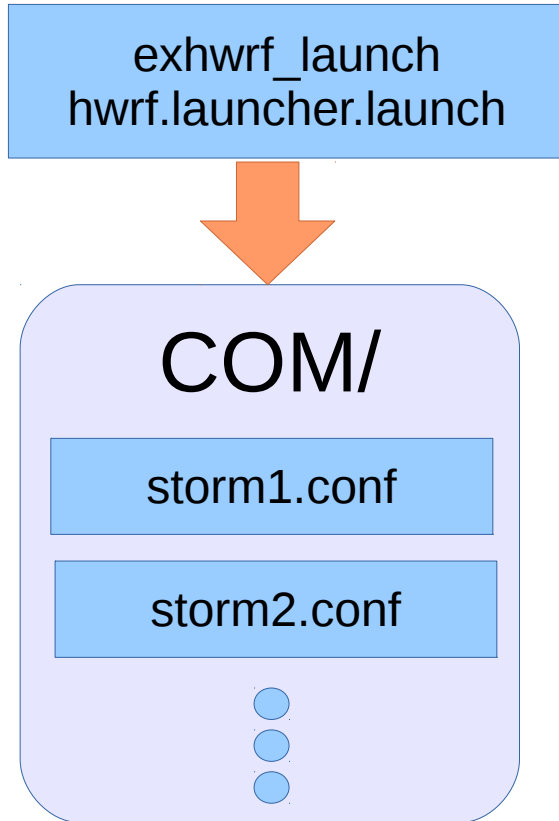

## hwrf.launcher.launch()

- exhwrf\_launch writes storm\*.conf
- Contains processed config data
  - Later jobs only read the storm\*.conf and never process other conf info
- Edit storm\*.conf to make per-cycle changes, such as emergency
- Operational example:
  - GFS ENKF failed in operations.
  - Add **[config]** run\_gsi=no for one cycle
  - HWRF forecast run without data assim

# Make storm\*.conf

## hwrf.prelaunch

- Prelaunch functions modify the configuration before writing storm\*.conf
  - Run after all other config options are parsed!
- Example from hwrf\_basic.conf:

```
[prelaunch]
basin_overrides=yes
```

  - Tells hwrf.prelaunch.prelaunch\_basin to read basin-override files parm/hwrf\_{EP,AL,CP,...}.conf

# Load storm\*.conf

## hwrf.launcher.load()

```
hwrf.launcher.  
HWRFLauncher  
  
hwrf.config.HWRFCConfig
```

- Later jobs read storm\*.conf
  - Each storm has its own \*.conf file
  - hwrf.launcher.load()
  - \$CONFhwrf = path to storm\*.conf
- hwrf.launcher.HWRFLauncher
  - subclass of hwrf.config.HWRFCConfig
  - Contains many convenience functions for accessing conf info

# HWRFLauncher/HWRFCConfig

hwrflauncher.  
HWRFLauncher

hwrflauncher.HWRFCConfig

hwrftask.HWRFTask  
... and its subclasses ...

hwrflauncher.\*  
and direct conf usage

- HWRFLauncher/HWRFCConfig.
  - Classes that access conf data.
  - `getstr(section,key) => value`
    - Raise exception if key unspecified
  - `getstr(section,key,default)`
    - Return default if key is unspecified
  - `getint, getfloat, etc.`
    - Specified return types
  - `cycle - forecast cycle (property)`
  - (see docs or \*.py for full list)
- Most conf access is through **HWRFTask** (next slide)

# HWRFTask

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Represents one task to be performed
  - GeogridTask, WRFAtmos, etc.
- Has a database taskname
  - self.taskname
  - More on database in a later presentation.
- Has a conf section (self.section)
- Has an HWRFCConfig (self.conf)
- Default: task name = section name

# HWRFTask

- Aliases:

- `confstr(key)`

- = `task.conf.getstr(task.section,key)`

- String value for key in my conf section.
  - Raise exception if missing.

- `confstr(key,default)`

- Same, but return default if missing

- `confbool, conffloat, etc.`

- Alternate datatypes

hwrflauncher.  
HWRFLauncher

hwrflauncher.  
HWRFLauncher

hwrftask.  
HWRFTask  
... and its subclasses ...

hwrftask.  
HWRFTask  
... and its subclasses ...

hwrftask.  
HWRFTask  
... and its subclasses ...

# HWRFTask

hwrflauncher.  
HWRFLauncher

hwrflauncher.  
HWRFLauncher

hwrftask.  
HWRFTask  
... and its subclasses ...

hwrflauncher.  
HWRFLauncher

- `task.icstr("{FIXhwrflauncher}/grid{gridnum}")`
  - Expand string with substitution

**[dir]**

`FIXhwrflauncher = {HOMEhwrflauncher}/fix/`

`HOMEhwrflauncher = /path/to/install/dir`

**[mytask]**

`gridnum = 5`

- Returns `"/path/to/install/dir/fix/grid5"`

# HWRFTask

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- `task.timestr("{FIXhwrf}/month{aMM}.dat",  
ftime, atime, ...)`
  - String substitution with fcst/analysis time info
    - atime is optional, defaults to `self.conf.cycle`
  - [dir]**  
`FIXhwrf = {HOMEhwrf}/fix/`
  - Returns “/path/to/install/dir/fix/month08.dat”  
for a cycle in August.
  - See `hwrf.config.HWRFCConfig.set_time_vars`  
for list.

# HWRFTask

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Shortcuts:

- getexe("wrf") - **[exe]** section wrf key
- getdir("FIXgsi") - **[dir]** FIXgsi key
- getloc('syndat') - syndat in **[exe]** or **[dir]**

- Taskvars:

- Object-local key=value for string expansion
- task.tvset(key,value) - set object-local value
- task.tvget(key) - get object-local value
- task.tvdel(key) - delete object-local value
- task.taskvars - dict of object-local values
- task.tvhave(key) - check for object-local value

# hwrf.namelist.NamelistInserter

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Insert config information into a file
  - Intended for Fortran namelists, but can work with other text files
  - Converts Python datatypes to Fortran Namelist datatypes

```
hwrf.conf: [conf]
```

```
hwrf.conf: var=T,F,T
```

```
myfile.nl: &nl
```

```
myfile.nl: myvar=<var>/
```

```
output: &nl
```

```
output: myvar=.true.,.false.,.true./
```

# hwrf.namelist.NamelistInsertter

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Specify datatype for conversion:
  - float <f:var> or <r:var>
  - integer <i:var>
  - String <s:var>
  - Bool <b:var> or <l:var>
  - Date/time <d:var>
    - YYYY-MM-DD\_HH:MM:SS
- Insert without type conversion:
  - <u:var>
- Guess datatype:
  - <var>

# hwrf.namelist.Conf2Namelist

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Make Fortran namelist from conf data.
- No input text file; only needs conf data.
- Can merge multiple Conf2Namelist together to make Fortran arrays
  - used to merge multiple domains' data when making the WRF namelist.

# hwrf.namelist.Conf2Namelist

## Single Domain Example

```
conf=RawConfigParser()  
conf.readfp(StringIO(''  
[sec1]  
physics.mp_physics=85  
physics.cu_physics=84  
namelist=sec2,sec3  
[sec2]  
physics.cu_physics=4  
physics.bl_pbl_physics=93  
[sec3]  
physics.bl_pbl_physics=3  
'' )  
str(Conf2Namelist(  
    conf, 'sec1' ) )
```

**&physics**

```
bl_pbl_physics = 3  
cu_physics = 84  
mp_physics = 85  
/
```

hwrf.namelist.\*  
and direct conf usage

# HWRF Input Data DataCatalog

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Specifies location of inputs to HWRF
  - GDAS, GFS, GEFS, GFS ENKF, etc.
- Example: GFS spectral forecast file in **[hwrfdata]** section (hwrf\_input.conf):

```
[hwrfdata]
```

```
inputroot={WORKhwrf}/hwrfdata
```

```
gfs={inputroot}/gfs.{aYMDH}
```

```
gfs_sf={gfs}/gfs.t{aHH}z.sf{fahr:02d}
```

# HWRF Input Data

## InputSource

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFFConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Lists available input data (DataCatalogs), order in which they can be attempted, and valid cycles.
- Jet example (hwrf\_input.conf):

```
[jet_sources]
jet_hist%location = file:///
jet_hist%histprio = 90
```
- exhwrf\_input job will look at the **[jet\_hist]** section to find input data.
  - ...**histprio=90** used to decide which other input sources are tried first.
  - Higher priority sources are tried first.

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Driven by Conf2Namelist

- bold are conf sections (hwrf\_expt.py)

```
stormlouter=WRFDomain(conf, 'stormlouter')
```

```
stormlinner=WRFDomain(conf, 'stormlinner')
```

```
moad=WRFDomain(conf, 'moad')
```

```
wrf=WRFSimulation(
```

```
    conf, 'wrf', moad, conf.cycle,
```

```
    to_datetime_rel(126*3600, conf.cycle))
```

```
wrf.add(stormlouter, moad)
```

```
wrf.add(stormlinner, stormlouter)
```

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Set information that is not domain-specific (hwrf\_expt.py):

```
wrf=WRFSimulation(  
    conf, 'wrf', moad, conf.cycle,  
    to_datetime_rel(126*3600, conf.cycle))
```

```
[wrf]
```

```
dt = 38+4/7
```

```
bdystep = 21600
```

```
ptsgm = 15000
```

```
ptop = 200
```

```
prep_hybrid = .true.
```

```
io_form = 11
```

```
namelist = wrf_namelist
```

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Namelist settings that are not domain-specific (hwrf\_expt.py):

```
wrf=WRFSimulation(  
    conf, 'wrf', moad, conf.cycle,  
    to_datetime_rel(126*3600, conf.cycle))  
[wrf_namelist]  
physics.var_ric = 1.0  
physics.num_soil_layers = 4  
dynamics.euler_adv = .False.  
bdy_control.spec_bdy_width = 1  
...
```

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Domain-specific information
  - Namelist info in separate section (hwrf.conf).

```
moad=WRFDomain(conf, 'moad')
```

```
[moad]
```

```
nx = 288
```

```
ny = 576
```

```
parent_grid_ratio = 1
```

```
dx = 0.135
```

```
dy = 0.135
```

```
start = moad
```

```
namelist = moad_namelist
```

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Namelist information for one domain.
  - If settings are in parent domain but not child, they are copied from parent (hwrf.conf).

```
[moad_namelist]
```

```
physics.mp_physics = 5
```

```
physics.ra_lw_physics = 4
```

```
physics.ra_sw_physics = 4
```

```
physics.sf_sfclay_physics = 88
```

```
physics.sf_surface_physics = 2
```

```
physics.bl_pbl_physics = 3
```

# WRF Configuration

hwrf.launcher.  
HWRFLauncher

hwrf.config.HWRFCConfig

hwrf.task.HWRFTask  
... and its subclasses ...

hwrf.namelist.\*  
and direct conf usage

- Auto-centering. hwrf\_expt.py:

```
stormlouter=WRFDomain(conf, 'stormlouter')  
stormlinner=WRFDomain(conf, 'stormlinner')
```

- From hwrf.conf:

```
[stormlouter]
```

```
nx = 142
```

```
ny = 274
```

```
...
```

```
start = auto ;; Center on storm or wrfanl
```

```
[stormlinner]
```

```
nx = 265
```

```
ny = 472
```

```
...
```

```
start = centered ;; Center on parent or wrfanl
```
